SUMMARY

Business oriented data scientist student with an academic background in Digital Business Development and Data science, as well as extensive professional experience in customer-focused roles and business development. Proficient in conducting advanced technical analyses and utilizing sophisticated data analytics tools.

WORK EXPERIENCE

Business Development Internship, Sparebank 1 Nord-Norge May 2024 - August 2024

- Collaborated with a cross-functional team to analyze the Financial Data Access (FiDA) regulation and proposed Payment Services Directive (PSD3).
- Identified strategic opportunities and risks for the bank, presenting findings in a co-authored report to senior management which became mandatory reading for those working in business development.
- Gained insight into the bank's data platform migration strategy from SAS to Databricks and Snowflake, including database design, data pipelines, and script transformation processes presented by the head of data analytics.

Team Leader, Avarn Security May 2023 - September 2023

- Quickly promoted from traffic controller to team leader in charge of five person teams and coordinating with construction workers.
- Successfully managed and coordinated teams during roadwork projects to ensure smooth operations.

Store Manager, Volt Fashion October 2019 - June 2023

- Transitioned from assistant manager to acting manager, delivering exceptional results during peak seasons like Christmas and challenging periods such as the early COVID-19 pandemic.
- Maintained consistently high performance, contributing to both sales and team development over four years.

EDUCATION

MSc Business Administration and Data Science, CBS August 2023 - Present

- Combines advanced analytical skills with business acumen to drive strategic and operational impact.
- Developing expertise in AI, NLP, and deep learning technologies, with a focus on their evolving business applications.

BSc Digital Business Development, Norwegian University of Technology and Natural Science August 2020 - June 2023

- Interdisciplinary program blending computer science, economics, and management to harness the potential of digital solutions.
- Graduated with top grades and specialized in data science and blockchain technology through electives and bachelor thesis.
- Completed an exchange program at Royal Melbourne Institute of Technology (2022), focusing on data science, blockchain, e-commerce, and macroeconomics.
